HIV By Chemiluminescence

Investigations	Methods	Result	Biological Ref. Interval | Unit
HIV 1 & 2 Antibodies and P24 Antigen test			
Test value	Chemiluminescence	0.160	INDEX VALUE
Cut off value		1.0	1.0 | INDEX VALUE
Result			
Interpretation		Non-Reactive	Non-Reactive

The test is performed on fully automated Siemens Advia Centaur XPT chemiluminescence immunoassay (CHIV) system.
Result interpretation criteria with Index Value:
Non Reactive : <1
Reactive : >1
It is for qualitative test for detection of HIV p24 antigen and antibodies to HIV 1 & 2.
This is a screening test & all reactive samples results should be confirmed by supplemental and confirmatory assays like Western blot , HIV DNA PCR.

HbsAg By Chemiluminescence

Investigations	Methods	Result	Biological Ref. Interval | Unit
Hepatitis B surface Antigen (HBsAg)			
Test value		<0.10	INDEX VALUE
Cut off value		1.0	1.0 | INDEX VALUE
Result			
Interpretation		NON-REACTIVE	NON-REACTIVE

This is an in vitro immunoassay for the qualitative detection of hepatitis B surface antigen (HBsAg) in human serum and plasma. The assay may be used in conjunction with other serological and clinical information to diagnose individuals with acute or chronic hepatitis B infection.

HCV By Chemiluminescence

Investigations	Methods	Result	Biological Ref. Interval | Unit
Anti HCV			
Test value		0.15	INDEX VALUE
Cut off value		1.0	1.0 | INDEX VALUE
Result			
Interpretation		NON REACTIVE	NON REACTIVE

This assay is an invitro diagnostic immunoassay for the qualitative determination of immunoglobulin G (IgG) antibodies to hepatitis C virus (HCV) in human serum or plasma. The assay may be used in conjunction with other serological and clinical information to aid in the diagnosis of individuals with symptoms of hepatitis and in individuals at risk for hepatitis C infection.
